

# EarMagic – Absolute Pitch Training Partner

---

*Data Sheet for Standard Edition*

*July 2010*

## *Introduction*

When you face the need to acquire Absolute Pitch, the foremost problem is to find your partner. Without him/her, you just can not start the process. The computer can be a perfect partner since you can use it anytime you want. Simply, what the program does is what your partner is supposed to do. It contains all the necessary features to begin your practice right away. This is, however, not a computer aided training course where the computer takes an instructor role. The Standard Edition is aimed to take the partner role, instead. Please note the difference. Since you can customize the program, you can apply your favorite method, if you have one.

## *Features:*

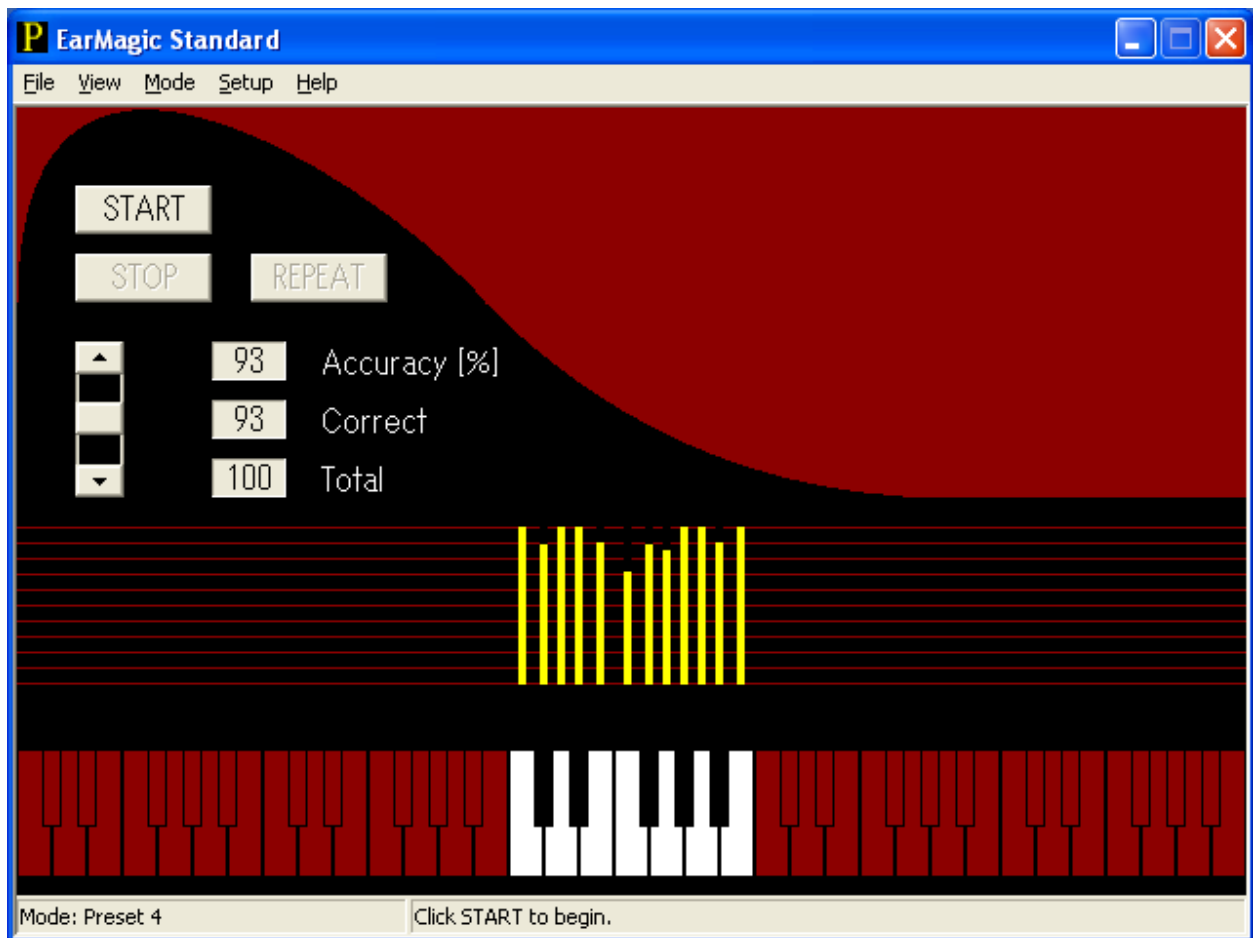

1. Easy to use intuitive User Interface. You can learn basic operations under 10 minutes.
2. There are five Presets to start your practice right away and seven Customizable memories, where you can select any notes on the keyboard.
3. Totally customizable for most training scenarios.
4. Graph and Statistics View to assist your practice.
5. No installation required – Just double click on the icon to start.
6. Very compact – The program fits perfectly into any media such as USB stick if you need to borrow someone else's computers. A floppy is also usable for this option.
7. You can use any Windows PCs from Windows 95 including Vista and Windows 7.
8. Screen Keyboard is available for your experiments. Use your mouse to play.
9. Automatic Saving feature remembers where you left off. You are right back to where you were next time you start the program.
10. The program is a very good companion to our new book: A Totally New Approach to Ear Training.
11. You can download an evaluation version to try out. There is no risk in your part.
12. The Standard Edition has the same features provided by the Basic Edition plus 12 Note Mapper function used in the book mentioned above.

## *Download*

What are you waiting for? Please go to [www.pianistica.com](http://www.pianistica.com) to try out the product. Thank you very much for your interest.

## *Screen Shot*

This is what it looks like on your screen though it is best to see it for yourself.

### *Preset 1*

All white keys: It is probably one of the easiest to start with. If this is still confusing, create your custom sessions. Custom 1 through 7 can be used to meet your needs.

### *Preset 2*

All black keys: This key combination has an interesting effect. Many people who have absolute pitch yet not firmly, tend to be confused with half step difference. Try this one if you are one of them.

### *Preset 3*

B Major: This is a combination of white and black keys and half step lower than C Major, which tend to confuse a lot of people.

### *Preset 4*

The standard middle twelve notes: If you somewhat possess absolute pitch, this one is probably a good starting point. If this is too easy, try Preset 5.

### *Preset 5*

This is hard. If this is not an issue, use one of the Customs to include all the notes. That makes everyone envy you.
